BUSINESS OVERVIEW

Introduction

ECO Integrated Technologies, Inc.:

1. Complies with global standards for clean and accessible air and water
2. We are industry's Wellness Plan for all heated/chilled water systems, impacting the health and safety of water environments without the use of chemical additives
3. Our current and future innovative, disruptive technologies being pursued and evaluated by the Company today each has environmental and sustainable economic impacts creating shareholder value

MISSION:

Ensure industries and communities meet their Environmental, Social and Governance (ESG) goals and fulfill their stewardship obligations.

We are the compelling **CLEANTECH** offering for the future.

A compelling offer is ten times more effective than a convincing argument.

We are the compelling CLEANTECH offer:

ECO ProFlo™ offers a comprehensive lineup of water treatment solutions that present an eco-friendly remedy against the detrimental impacts of scale, corrosion, bacteria, and algae, without the need for chemicals. By deploying ECO ProFlo's products and services, companies are enabling environmental solutions consistent with ever-increasing GREEN sustainability goals.

[**CLEANTECH:** Any process, product, or service that reduces negative environmental impacts through significant energy efficiency improvements, the sustainable use of resources, or environmental protection activities.]

ECO ProFlo, LLC offers a comprehensive selection of solutions free from chemicals for addressing the detrimental impacts of scale, corrosion, bacteria, and algae across a variety of industries and applications. There are considerable advantages in terms of cost savings related to water, chemicals, energy, and maintenance.

1 provisional patent filed.

Market Opportunities

Fostering the growth of shareholder value with global ecological improvement through the economic stewardship of Intellectual Property and Innovative Disruptive Technologies

- ✓ **8 billion people in the world with 335 million in the U.S. create an endless market for ECO's innovative solutions.**
- ✓ **Annually, commercial HVAC systems consume trillions of gallons of water, require billions of dollars of treatment chemicals, and flood municipal water treatment facilities with contaminated water costing taxpayers trillions to remediate. ECO's technology reduces water consumption by up to 75% and eliminates chemical consumption, microbes, biofilm, and scale.**
- ✓ **ECO's technologies under consideration are innovative and when deployed will result in ESG compliance and increase shareholder value.**

ECO's Ongoing Investigations

ECO will continue its previous investigations into promising technologies

- **ECO is ardently pursuing efficient and proven solutions for landfills including material handling and size reduction, as well as renewable power generation from incoming and existing landfill waste streams.**
- **These areas of interest are now being actively sought out and studied by commercial entities and US administration officials at a greatly increased rate.**
- **The underlying principal solution of the growing landfill problems also apply to material resizing and mixing technologies so prevalent in mining, chemical, construction, and other industries.**
- **Waste to energy solutions that create viable revenue streams are now top priority of many local, state, and federal administrations in concert with the many privately owned landfills which face extinction due to overfilling, population encroachment, and disease propagation.**
